

CAMERON M HATCH

Texas | (210) 799-1745 | cmhatch15@icloud.com | linkedin.com/in/cameron-hatch-64b11b353

OBJECTIVE

Results-driven Industrial Engineering student seeking a manufacturing, automation, or supply chain internship to apply hands-on experience in inventory management and process improvement.

EDUCATION

Texas A&M University – College of Engineering, College Station, TX May 2028

Bachelor of Science in Industrial Engineering

Alamo Community Colleges, San Antonio, TX Dec 2025

Associate of Science in Engineering

WORK EXPERIENCE

Walmart Supercenter, Schertz, TX Sep 2025 – Present

Digital Personal Shopper

- Utilized digital order management systems to pick, stage, and track 100+ customer orders daily in a fast-paced environment
- Adapted pick/stage workflows in real time to sustain sub-5-minute fulfillment times during peak-volume period

Schlitterbahn Waterparks, New Braunfels, TX Apr 2023 – Aug 2026

Food and Beverage Warehouse Supervisor

- Cut weekly inventory reporting turnaround time by 1-2 days, completing reports ahead of corporate deadline by correcting discrepancies
- Preserved data integrity for \$50,000+ in product by resolving procurement and logistics errors across 25+ locations and 8 park sections
- Led warehouse-to-location and park-to-park transfer coordination using inventory management software, keeping park-wide fulfillment reports updated

Food and Beverage Park Supervisor

- Directed a team of 15+ across 3+ food stands and a bar, enforcing health code and PPE standards to achieve 95%+ inspection scores and a 100% work-accident-free rate
- Addressed customer complaints in under 5 minutes as primary point of contact, sustaining service quality and keeping lines moving during high-volume periods

TECHNICAL PROJECTS

Motion-Tracking Sentry Turret — Team Project (Arduino) Dec 2025

- Collaborated with a 5-person team to build a motion-tracking sentry turret with an Arduino UNO, ultrasonic sensor, 3 servo motors, and C++ control logic to detect and engage targets within 50cm
- Redesigned firing mechanism and stabilized rotating assembly after discovering a servo rotation limit and structural instability, restoring full functionality under servo load

Green Roofing Systems — Business Plan, Team Project Dec 2025

- Partnered with 4 classmates to frame urban heat island effect as core design problem, setting measurable temperature-reduction goals to evaluate modular vs. monolithic alternatives
- Conducted a technical risk analysis across five factors — structural load, water leakage, maintenance access, irrigation cost, and allergens — pairing each with engineered mitigation
- Managed project to a fixed \$200,000 budget across materials, facility, and labor, comparing cost and feasibility across green-roof design alternatives to reach a break-even target by year 3

SKILLS

Microsoft 365 (Intermediate), Excel, AutoCAD/SolidWorks, Python, Java, Word, PowerPoint, Process Improvement, Operations Management, Workflow Optimization, Inventory Control & Reconciliation, Data Discrepancy Resolution.

ACTIVITIES & AWARDS

- IISE Member — Institute of Industrial and Systems Engineers, Texas A&M Chapter
- Eagle Scout — Boy Scouts of America; led a community-improvement project to complete the rank, earned by fewer than 6% of participants nationally
